adam,

please issue a PO or explain to service that the wires were to be run and not terminated. shipping a drive to the factory so it can be screwed to the side was not what we agreed upon and makes zero sense.

jim

The offgas is controlled by the flow of air to the burner. The air flow is controlled by the set point for how many stages you want to run. You know proportionally which to stage off.

I will look into it.

This is a photograph of the stack, I am trying to copy the photo.

This is a photograph of the stack with the top removed.

The stack has the following features:

1. A flange connection to some other part.

2. Flange connections to some other part.

3. A flange connection to some other part.

4. A flange connection to some other part.
